Mountain Geography

Physical and Human Dimensions

MARTIN F. PRICE, ALTON C. BYERS, DONALD A. FRIEND, THOMAS KOHLER,
AND LARRY W. PRICE, EDITORS

“This book is a very easy read. . . . Recommended.”—*Choice*

“Provides an excellent comprehensive presentation for students planning to specialise in Mountain Geography.”—*Buchbesprechung*

This major revision of Larry Price’s book *Mountains and Man* (1981) is both timely and highly appropriate. The past three decades have been a period of remarkable progress in our understanding of mountains from an academic point of view. Of even greater importance is that society at large now realizes that mountains and the people who reside in them are not isolated from the mainstream of world affairs, but are vital if we are to achieve an environmentally sustainable future.

Mountain Geography is a comprehensive resource that gives readers an in-depth understanding of the geographical processes occurring in the world’s mountains and the overall impact of these regions on culture and society as a whole. The volume begins with an introduction to how mountains are defined, followed by a comprehensive treatment of their physical geography: origins, climatology, snow and ice, landforms and geomorphic processes, soils, vegetation, and wildlife. The concluding chapters provide an introduction to the human geography of mountains: attitudes toward mountains, people living in mountain regions and their livelihoods and interactions within dynamic environments, the diverse types of mountain agriculture, and the challenges of sustainable mountain development.

Martin F. Price is Professor of Mountain Studies and Director of the Centre for Mountain Studies, Perth College, University of the Highlands and Islands, United Kingdom, where he holds the UNESCO Chair in Sustainable Mountain Development.

Alton C. Byers is Director of Science and Exploration at The Mountain Institute (TMI)

Donald A. Friend is Professor of Geography at Minnesota State University.

Thomas Kohler is Associate Director in the Centre for Development and Environment and lecturer at the Department of Geography at the University of Bern, Switzerland.

Larry W. Price is Professor Emeritus in the Department of Geography at Portland State University.

400 pp. 8-1/2 x 11 134 b/w photographs, 119 line illustrations, 8 maps, 12 tables
